

# Title of Contribution for Progress in Landslide Research and Technology Book Series (do not exceed 100 characters including spaces)

Firstname Firstsurname, Secondname Secondsurname, Thirdname Thirdsurname

## Abstract

This is an example text template for the full paper submission to the Progress in Landslide Research and Technology book series. The book series publishes original articles for practice. Contributed articles align with one of five categories: Original articles, Review articles, Case studies, IPL/WCoE/Network activities and Teaching tools with extras online (PPT, Video). The Abstract should be concise and self-contained, clearly stating main conclusions of the paper. The length should be of minimum 150 words, and within 300 words. The style to be used, according to the Template Style List, is the Normal Style with justification. At the end of the abstract text a list of keywords (minimum: 3 maximum: 7) should be added as shown in this template.

The paper size should be set to size (210 mm × 279 mm). Please submit both Latex and pdf files.

**The standard page length for the 7th World Landslide Forum is 6-8 pages.**

**Keywords:** keyword1, keyword2, keyword3

## 1 General body of the manuscript

The main text of the paper should be formatted using the Normal style described in the Word template. The first

paragraph of each Section should not have indentation while following paragraphs should be indented by 5 mm (subsequent paragraphs are automatically indented).

Left indentation is of 5 mm (as per Template Style Normal). The Normal style of text is based on the Times New Roman font, size 10. Line spacing is 12.5pt. The page format must be strictly respected as per Template Page Format.

## 2 Sections of the manuscript

### 2.1 Title, Author names and affiliations

The paper should start with the title section which has a special single-column formatting (see top of first page). Please make sure to maintain section separation to ensure proper column formatting of the document.

Authors and affiliations are shown above. For the corresponding author (marked with ✉) include an email address and telephone if required.

Affiliations conclude the first section of the paper, according to the style “Affiliation” in the Style List of paper Template. Each affiliation must be preceded by the relevant number between parentheses as in the example at the top of this file. Each affiliation must be placed on a separate line, using the following order: Department/Branch/Office, Institution/University, Address, Country. For the affiliation of the corresponding author also the following information must be included: email and/or telephone number.

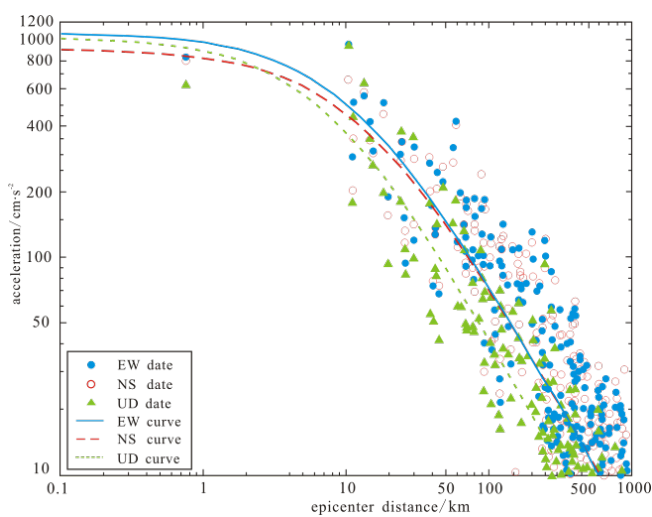

Each author should also define a short “running” author names and title to be used in the right of the even pages and in the left of the odd page headings, respectively (see example above in the page heading where the Template has the sentences “F. Author, S. Author, T. Author” and “Short Running Title of Contribution”). The running title should be limited to a maximum of 20 characters, blank spaces included.

### 3 Figures and figure captions

Figures are allowed either in greyscale or in colour. It is possible to insert column-wide figures (half-page width) with maximum width of 85 mm and double-column-wide figures as well with a max allowed dimension of 174 mm. In any case, the max height is 230mm. Figure should have resolution of 400 dpi for greyscale images and of 300 dpi for colour images.

The following is an example of column-wide figure. The figure line (the line of text in which the figure has to be placed) should be formatted choosing the appropriate Style “Figure” from the Template Style List. This will ensure proper distancing between figure and surrounding text. However, authors are free to add one or two empty rows of normal text to adjust formatting and visual appearance.

Please position your large figures in the best way, as to avoid large empty spaces on page.

**Figure 1:** Example of half page figure. Captions which are 2 or more rows long must be justified. Shorter caption must be column-centred. Please ensure to select the style “Figure Caption” and to place caption below figure. Figures should be cited in text using the short: “Fig.”.

### 4 Mathematics and equations

All mathematical notations should be kept outside normal text paragraphs. Please avoid copy-pasting of equations as images. If equation numbering is necessary, please use a right-sided numbering between squared parentheses as in the following

example.

$$\beta = \frac{\sin \alpha}{\cos \gamma} \quad (1)$$

All the units of measurement used in the paper should be in the SI system and every time a new symbol, group of symbols or specific operator is introduced, it should be explained and described along with its unit of measurement if appropriate.

### 5 Tables

In all the manuscript, tables have to be formatted according to the following example. It is possible to insert a single- or a double-column table (if needed) provided that the author insert the proper section breaks to ensure column formatting separation between sections.

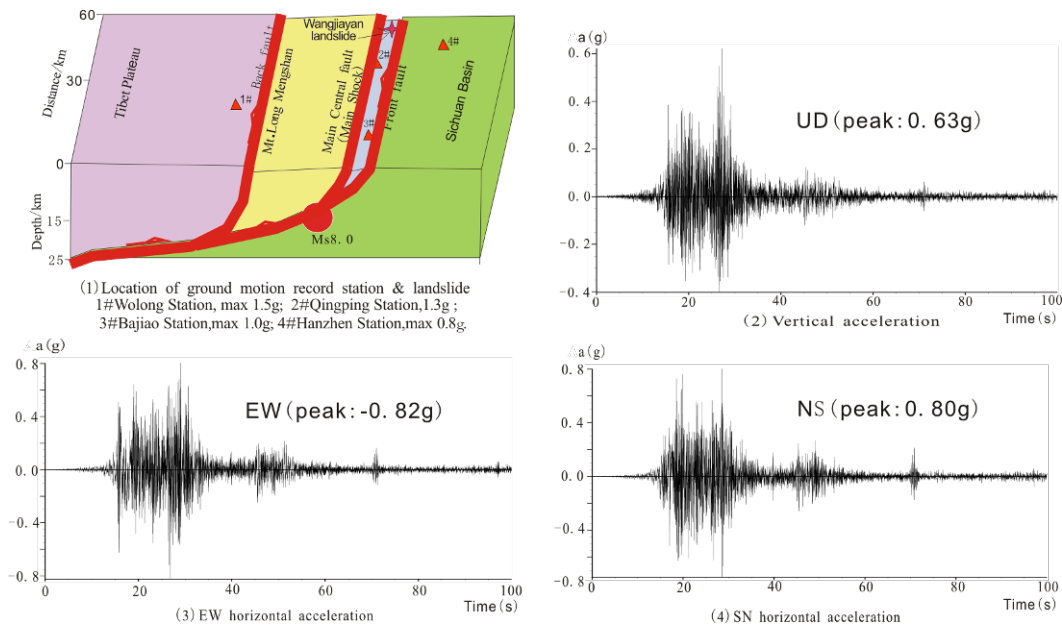

Table caption must precede the table, and has to be formatted according to the style “Table caption”. Maximum table width is 85 mm for single column tables and 174 mm for page-wide tables. It is possible to add page-wide sections (using the appropriate section breaks as explained and as exemplified below, to insert large figures. The maximum allowed width is 174 mm. Also remind that max allowed height for both figures and tables is limited to 230 mm.

**Table 1:** Example of table. Maximum single-column width is about 85 mm.

Col Head 1	Col Head 2	Col Head 3	Col Head 4
Text	Description 1	34.90	17/11/2011
Text	Description 2	12.98	01/06/1998
Text	Description 3	3.64	31/02/1900

### Acknowledgments

In the Acknowledgments section, appearing just before the References, the authors may credit others for their guidance or help. Also, funding sources may be stated. The Acknowledgments section does have a section heading at level 1, as in this example. Following this section the References section begins for which authors must use the style “Reference” and use reference citation rules as per the journal Landslides. Please follow the rules of the same journal also for citations within

**Figure 2:** Example of a page-wide figure.

the text body.

In the following section we present some example of formatting for references related to edited books, conference proceedings, periodic journal papers, scientific reports and web sites. References must be, firstly, in alphabetical order and then in date order, descending.

For any other formatting issue please refer to the editorial guidelines and style used by the ICL journal “Landslides”, edited by Springer.
